

DUIT FORYA

Duit Forya is a macro program that can be specific, and simple. It has it's own "programming language" that can turn specific tasks into automated tasks.

Or you can just have it press one key with a really easy-to-use simple macro mode made in a easy-to-read interface.

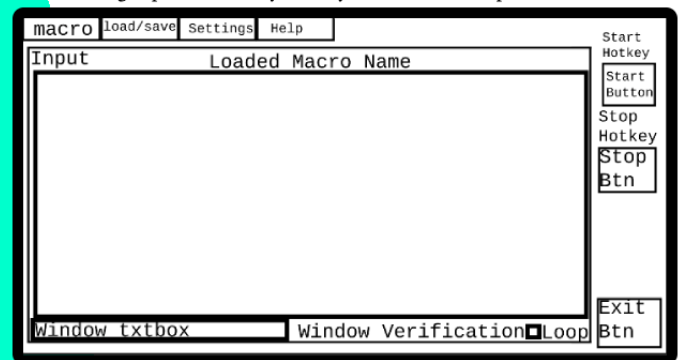

Duit Forya was made to accomplish simple tasks that was thought to be easily automated. After design and concept, it was also thought of that it can do more.

With a some what easy-to-read programming language, Duit Forya can do more complicated tasks, as well as do a simple key press every five seconds.

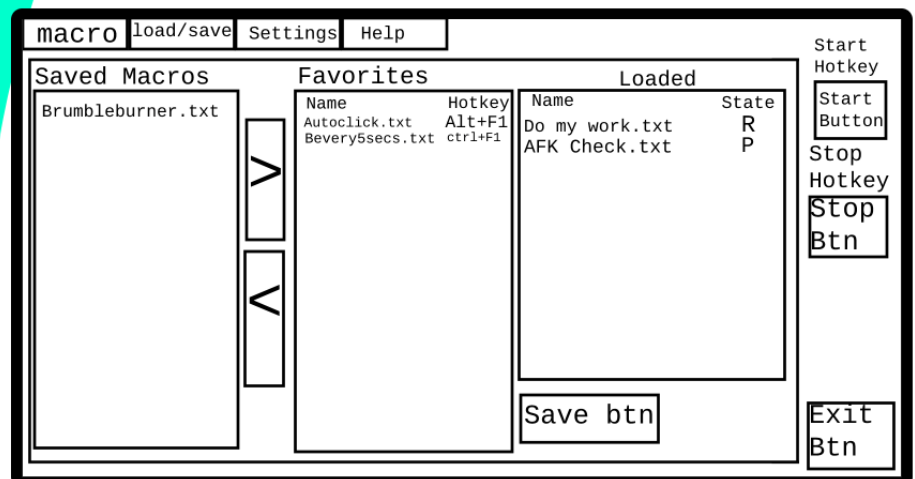

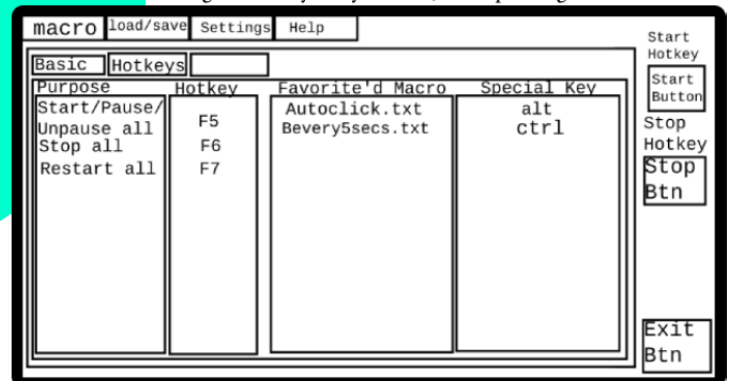

Duit Forya is ment to be used on all programs, focused or in the background, from keyboard input to mouse input. Your tasks can now be easily automated!

Made and designed by Jao Baptista

*Images are very early outline/concept designs

Duit Forge Code of Conduct

- The roadmap is subjected to change, but not it's goals. Goals will NOT be removed unless they are impossible to complete.
 - GUI design/polish is done throughout progression, and must come/happen when function design/implementation is done.
 - When overworked/designed, you must come back later from a different point of view, overdesign/work causes issues with design and workflow
 - When objectives are not met within the date, they are pushed to the next milestone end date.
 - All previous code is subjected to change if current code has a more compact/efficient solution.
 - Graphical User Interfaces change based on ease of use. If it's too complicated for a 60 year old to do, it must be changed (besides the macro language)
 - The program MUST NOT seem sketchy, in such a way that it looks more like a harmful product rather than a automated task solution. EXAMPLE: I dont want no one calling Duit a key-logger
 - All code must have commeneted properties. Such as describing what each line/block does.
 - The program will NOT connect to the internet regularly. The only exception is for updates and MAYBE future price options if its sellable.
 - ON OCCASION: The program shall not be sold for no less than 2 Million.
- Program shall be sold as a single unit. Meaning once you buy it once, you get that and thats that. No subscription

LIST IS SUBJECTED TO CHANGE AS PROJECT PROGRESSES (Current list is as of 6/5/2023)

week	what
3	<p>Design/outline of program look in GUI</p> <p>Basic macro via string input. S D for S for key and D for action, <u>HOLD DOWN AND LET GO NEEDS TIME TO MAKE</u></p> <p>Interval between macro like five seconds.</p>
4	<p>Window dropdown for selecting which window to use</p> <p>Loop checkbox (main issue with looping, is trying to stop the loop via a variable, idk bout that)</p> <p>Settings Tab layout/design</p> <p><u>Hotkeys/setting tab for start, stop</u></p> <p><u>Hotkeys to that start/stop</u></p>
5 MA	<p>Special characters like shift/alt/ctrl or f1 f2 f3 etc</p> <p><u>Hotkeys/setting tab for start, stop</u></p> <p><u>Hotkeys to start/stop</u></p> <p><u>HOLD DOWN AND LET GO NEEDS TIME TO MAKE (no code to use)</u></p> <p><u>BACKGROUND ACTIVATION (no code to use)</u></p> <p>GUI Polish</p>
6	<p>Macro Pages Tab layout/Design</p> <p>Load/Save system that saves a text file and shows in a grid menu for it.</p> <p>Able to type into macro from program, then save/load</p>
7 MB	<p>Hotkeys for loading specific files in macro pages tab. Macros will be loaded based on the window highlighted, if no window is highlighted or the program is, an error will pop up.</p> <p>Hotkeys for stop, restart, pause, unpause, and quit hotkeys.</p> <p>Saving settings options</p> <p>GUI Polish</p>
8	<p>Design for a "simple" page. Simple page will be a VERY simplified version. You can select what key you want pressed, and the interval, without having to code it.</p> <p>Saving for this simple page</p> <p>Multiple keys in a macro at once.</p>

9 MC	<p>Simple page Done and looks pretty</p> <p>Error checks</p> <p>Dark theme setting</p> <p>GUI Polish/Design: Colors, program icon, overall color theme</p>
10	<p>General mouse movement. Move x amount of units or seconds a certain direction</p> <p>Add load/save implementation</p> <p>GUI Polish</p>
11 MD SELLA BLE STATE	<p>Specific mouse movement. Move specifically across your desktop for a certain distance</p> <p>Add load/save implementation</p> <p>GUI Polish</p>
12	<p>Find out how to sell/secure code from being unpacked and edited/reused</p> <p>Could use server, account verification, one time buy/sell, SAAS route</p>
13	<p>Implement sell/secure code idea</p> <p>Could use server, account verification, one time buy/sell, SAAS route</p>
14 DONE	<p>General Resolution compatibility so the macro has limited issues. Like using 16;9 aspect ratio as a default selection</p> <p>Pixel/image detection if possible?</p> <p>Study in ways to make it profitable/sellable. Look into pattoning it and preventing ways that code could be stolen.</p> <p>Implement help tab layout/design</p>
